

Roll Assembly Information Sheet

1. Open the container and place the roll into the container with the top of the roll facing toward the centre.

2. Unravel a small amount of the roll first so you have enough room to complete. Thread the roll through the hole in the lid, then close the lid with the roll inside the container

3. Loop the roll through the clip opposite the roll, then loop the top through the other clip as shown in the instructions.

4. How do I use the roll once it is assembled?

After assembly, pull the roll through to the next pouch and tear off each dose as needed.

5. How do I know the roll is assembled correctly?

The roll should sit inside the container, feed up through the lid opening, and pass through the clips so it can be pulled forward smoothly.
